Don't be too quick in approval of this permit to fish farm in U.S. waters off the Florida coast. The environmental impact and safety has not been adequately vetted. Questions on who would have regulatory authority and enforcement over their operations need clarification. Clear payment for any liability arising from their operations need to be established in legal documents. Too often taxpayers are on the hook when companies pollute. Under capitalized companies simply go bankrupt to avoid paying for their clean up costs.
